This is an ideal way to create a java project and everyone should follow the similar method to create a Java Project who are working in VS Code.

And the students who are using JetBrains IntelliJ IDEA, kindly ignore this.

**Step 1 :** Click on **'View'** and select **'Command Palette'**.

Step 2 : Select **'Java: Create Java Project'** from the drop-down list.

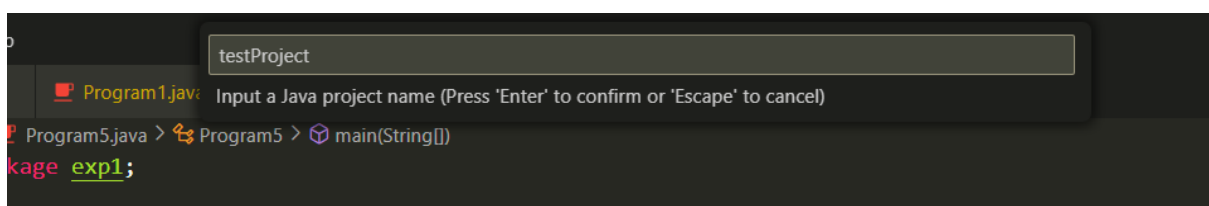

**Step 3 :** Select **'No build tools'** from the drop-down list.

Step 4 : Select a suitable location for creating a project.

Step 5 : Enter a valid Project Title for your Java Project.

A new window will open with your newly initialized project.

NOTE: All the new files should be created inside the **'src' (source)** folder.

** If you encounter any error, please ping in the group. **
